Perform the following DB operations using Cassandra.

1. Create a key space by name Employee

create keyspace "Employee" with replication =
{'class':'SimpleStrategy','replication_factor':1};
cqlsh> use Employee;

2. Create a column family by name Employee-Info with attributes Emp_Id Primary Key, Emp_Name, Designation, Date_of_Joining, Salary, Dept_Name

create table Employee_Info(Emp_id int PRIMARY KEY,Emp_name text,Date_of_Joining timestamp,Salary float,Dept_Name text);

3. Insert the values into the table in batch

cqlsh:employee> begin batch

... insert into

Employee_Info(Emp_id,Emp_name,Date_of_Joining,Salary,Dept_N ame) values(1,'Nithin','2021-04-23',50000,'CSE')
